Re: Construction & Demolition Transfer, Treatment and Processing Facility,
Todco Inc. Wood Recycling
Permit No. 2908-TP
Davidson County, Doc ID No. 16792

Dear Mr. Warfford:

Your application for a Construction & Demolition transfer, recycle, resource recovery and processing facility has been submitted to the Division of Waste Management, Solid Waste Section (SWS) on your behalf by your consultant Blue Ridge Geological Services, Inc. It was received on December 28, 2011. Your permitting fee was received on May 30, 2012.

In accordance with GS 130A-295.8(e), the Section has reviewed your application and found it to be complete. A determination of completion means that the application includes all required components but does not mean that the required components provide all the information that is required for the Section to make a decision on the application.

It has been determined the Section requires clarification or additional information in order to complete the engineering review. Please revise the Application and the Operation Plan to include or modify the items listed below in the application.

1. The Application is not a Modification but a Permit to Construct a new Construction and Demolition Transfer, Treatment and Processing Facility.
2. The facility shall meet all requirements of any applicable zoning ordinance.
3. Financial assurance is required by state rules and statutes and must be continuously maintained for the duration of the facility's life. The closure cost estimate is the amount of money to hire a third party to remove and dispose of one week's worth of waste from the facility.
4. A more detailed engineering plan for the structures and processing areas is needed.
5. Service area (same as the Davidson County Landfill's) and maximum daily and monthly volume of construction and demolition waste received needs to be stated.

6. A responsible individual trained and certified in facility operations must be on-site at all times during all operating hours of the facility.
7. Waste may be stored on-site, in leak proof containers, with watertight covers, a maximum of 5 working days. Storage of the waste must not cause any nuisance, such as odor or attraction of vectors.
8. All water that comes in contact with solid waste, including vehicle wash-down water, is leachate and must be captured and properly treated before release to the environment.

. If you have any questions or comments, please contact me at (704) 235-2163, or by email at john.murray@ncmail.net.

Sincerely,

A handwritten signature in blue ink, appearing to read "John Murray". The signature is fluid and cursive, with the first name "John" and last name "Murray" clearly distinguishable.

John Murray, P.E.
Regional Engineer
Solid Waste Section
